

Generator Equipment Rental

We offer rentals of highly efficient generators from reputable manufacturers, namely CATERPILLAR and Atlas Copco, with power outputs ranging from 13.5 KVA to 1,200 kVA. CATERPILLAR and Atlas Copco generators have long been recognized as leaders in the industry for their technical parameters, efficiency of operation and reliability. These brands are characterized by their sturdiness, long service life, reliability, endurance and long-term stability of performance. Portable generators find their use in a wide range of applications, such as ensuring continuity of

power supply during outages, providing temporary power supply to equipment located outside the power grid and supplying electricity to concert and festival venues. The majority of our generators are soundproofed and are ideal for use in housing developments. In addition to rental services, we provide professional maintenance/repair services by our trained technicians and hands-on training in generator operation. We also offer on-site delivery of generators, including diesel fuel, secondary distributors and supply cables.

Generators

	Specs	STBY rating (kVA)	STBY rating (kW)	Prime rating (kVA)	Tank capacity (l)	Fuel consumption at full load (l/hr)
EC GEP 13,5	400V/20A/50Hz	13.8	11	12.5	45	3.6
